SCHOOL ERP

GRAPHIC DESIGN & UI/UX SCOPE REPORT

Complete design brief for two connected mobile applications

Application 1: School App — Principal, Vice Principal, Admin, Teaching Staff, Non-Teaching Staff and IT Staff

Application 2: Student App — Student and Parent experiences

Version 1.0 | Design handoff document | 03 November 2026

Prepared as a screen-by-screen design scope. The designer should use this document to create user flows, wireframes, high-fidelity UI, reusable components and clickable prototypes.

Document Control

Item	Details
Document purpose	Guide the graphic/UI designer to design both School ERP applications end-to-end.
Audience	UI/UX designer, graphic designer, product owner and development team.
Product structure	Two separate apps connected to one school platform/backend.
Design status	Requirements baseline for design. Some product rules are still marked as pending.
Language	Simple English. Use clear labels and short instructions in the UI.
Important instruction	Do not invent final business rules for items marked Pending. Show a proposed design state and flag it for product-owner confirmation.

How to Use This Report

- Design the complete flow, not only attractive dashboard screens.
- Create a separate flow for every role and user type.
- Show loading, empty, error, success, disabled, pending and rejected states wherever relevant.
- Use realistic sample data in designs, but label it as sample data.
- Keep a consistent design system across both apps while making each app's navigation suitable for its users.
- The developer must be able to understand what happens after every button, form submission and approval.

Important Product Boundary

This report covers the School App and the Student App. The Student App also contains a Parent login and Parent experience. It does not mean there are three separate apps.

The Student App supports two user modes: Student and Parent. Both use the same app download, but have different login paths, dashboards and permissions.

Contents

- 1. Product Overview and Design Goals
- 2. App Structure and User Roles
- 3. Shared Design System and UI Rules
- 4. School App — Common Entry and Authentication
- 5. Principal Module
- 6. Vice Principal Module
- 7. Admin Module
- 8. Teaching Staff Module
- 9. Non-Teaching Staff Module
- 10. IT / Technical Staff Module
- 11. Student App — Entry and Student Login
- 12. Student Profile and Student Dashboard
- 13. Parent Module — Login, Child Linking and Dashboard
- 14. Communication and Notifications
- 15. Shared Screens, States and Error Handling
- 16. Navigation and Screen Inventory
- 17. Required Design Deliverables
- 18. Prototype and Handoff Requirements
- 19. Pending Product Decisions
- 20. Designer Quality Checklist

1. Product Overview and Design Goals

The product is a school management platform with two connected mobile applications. The School App is used by school management and staff. The Student App is used by students and parents.

1.1 Main Product Goals

- Make school operations simple and organized.
- Allow each user to see only the information and actions permitted for their role.
- Reduce manual paperwork for attendance, timetable, exams, results and communication.
- Allow one parent account to connect to multiple children, including children studying at different schools, after verification.
- Keep school branding visible in the Student App.
- Make approval, notification and audit processes clear.

1.2 Two Applications

Application	Users	Main purpose
School App	Principal, Vice Principal, Admin, Teaching Staff, Non-Teaching Staff, IT Staff	Manage school operations, staff, students, academics, attendance, timetable, approvals and reports.
Student App	Student and Parent	View student information, attendance, timetable, homework, results, notices and communicate with the class teacher.

1.3 Design Principles

- Mobile-first layouts. The primary product is a mobile application.
- Simple English labels and short helper text.
- Role-based dashboards. Do not show the same dashboard to every role.
- Use clear status labels: Draft, Pending Approval, Approved, Rejected, Published, Active and Inactive.
- Important actions must have confirmation screens or confirmation dialogs.
- Use tables for management and lists/cards for mobile-friendly browsing.
- Design accessibility: readable text, good contrast, large touch targets and clear error messages.

2. App Structure and User Roles

2.1 School App Roles

Role	Login method	Account created by / source
Principal	Registered mobile number + OTP	Principal self-registration; school verification required.
Vice Principal	Username + Password	Principal creates account.
Admin	Username + Password	Principal creates one or more Admin accounts.
Teaching Staff	Username + Password	Admin creates account; approval required before credentials are generated.
Non-Teaching Staff	Username + Password	Admin creates account; exact designation list pending.
IT / Technical Staff	Username + Password (proposed)	Company Super Admin creates account.

2.2 Student App User Modes

Mode	Login method	Account association
Student	School-issued Username + Password	Student account is created by the school Admin.
Parent	Mobile Number + OTP	Parent enters a Student Username to request/link a child. Access is granted only when registered guardian mobile verification matches.

Important: A Student Username is an identifier, not proof of parent identity. Never show student details or grant access just because a username was entered.

2.3 Multiple Roles and Multiple Schools

- One real person may have more than one role, for example Admin + Teaching Staff. The design must support role switching only where the account has approved role assignments.
- One Parent account may connect to multiple children.
- Those children may belong to different schools.
- The Parent must clearly see which child and school are currently selected.
- A school user must never see another school's private data.

3. Shared Design System and UI Rules

3.1 Visual Direction

Use a clean, modern, trustworthy education-product style. The interface should feel professional but not crowded. The School App can use a more administrative visual language. The Student App should feel simpler and more friendly.

3.2 Design Tokens to Prepare

Token group	Designer task
Colours	Define primary, secondary, background, surface, border, text, success, warning, error and info colours. Confirm final brand colours with product owner.
Typography	Define font family, heading scale, body text, labels, helper text and numeric styles.
Spacing	Use a consistent spacing scale for margins, padding, cards and form gaps.
Shape	Define button, input, card, modal, bottom sheet and chip corner radius.
Icons	Use one consistent icon family. Icons must have text labels where meaning may be unclear.
Components	Buttons, text fields, dropdowns, date picker, OTP input, search, tabs, cards, tables, status chips, dialogs, bottom sheets, upload controls and empty states.
Navigation	School App: role-based bottom navigation or drawer depending on screen density. Student App: simple bottom navigation.
Responsive behaviour	Design phone layouts first; also provide tablet/desktop layouts for data-heavy Admin and management screens if web/tablet support is required.

3.3 Required Component States

- Default, focused, filled, disabled and error form states.
- Button default, loading, disabled and success states.
- List loading skeleton, empty list, error state and populated list.
- Approval pending, approved and rejected status chips.
- No internet, session expired and permission denied screens.
- File upload progress, upload success and upload failure.

3.4 Branding

The Principal or authorized school role manages the School Logo and school details. The Student App should display the relevant school logo in the student experience after the student's school association is verified. Do not use a student's personal profile photo as the school logo.

4. School App — Common Entry and Authentication

4.1 Screen Flow

Step	Screen	Required UI
1	Splash Screen	App logo, loading state.
2	Landing Screen	Welcome text, login/continue action.
3	Role Selection	Principal, Vice Principal, Admin, Teaching Staff, Non-Teaching Staff, IT Staff.
4A	Principal Login	Mobile number field, country code, send OTP.
5A	OTP Verification	OTP boxes, resend timer, edit mobile number.
4B	Staff Login	Username, password, show/hide password, forgot password.
6	Account Validation	Loading state and clear error if account/role/school is invalid.
7	Profile Completion	Shown to users whose profile is incomplete.
8	Role Dashboard	Open the correct dashboard after authentication.

4.2 Existing and New Principal

- Existing Principal: enter registered mobile, verify OTP, open existing Principal Dashboard.
- New Principal: verify mobile, enter basic details, select school or submit a new school request.
- If school exists: select the correct school from search results.
- If school is not listed: choose Other, enter full school name, address and PIN code.
- After submission: show verification pending screen. The stated target is within 48 hours; do not promise automatic approval unless the product team confirms it.
- Unverified Principal must not access school data or full features.

4.3 Staff Login and First Login

- Staff selects their role, enters school-issued username and password.
- Show password visibility control and clear validation messages.
- First login should ask the user to change the temporary password (security recommendation).
- Show profile completion if required.
- If the account is inactive, pending or blocked, show a clear explanation and support route.

4.4 Forgot Password

Account type	Recovery route
Vice Principal / Admin	Contact Principal; Principal can initiate a secure password reset.
Teacher / Non-Teaching Staff / Student	Contact Admin; Admin can initiate a secure password reset.
Principal	Use registered recovery method; details to be confirmed.
IT Staff	Company Super Admin support; final flow to be confirmed.

Do not display an existing password to Principal or Admin. Provide a reset flow. DOB alone must not be used as the only identity check.

5. Principal Module

5.1 Principal Main Navigation

- Dashboard
- Approvals
- Staff
- Students
- Academics
- Calendar
- Announcements
- Admin Management
- School Settings / Branding
- Profile

5.2 Principal Dashboard

Design a high-level school overview. The Principal should understand the school's current status quickly.

- Total Students, Teaching Staff, Subject Teachers, Non-Teaching Staff, Classes and Sections.
- Today's student attendance and staff attendance.
- Pending approvals and pending leave requests.
- Academic performance overview and exam/result status.
- Recent notices, calendar events and important alerts.
- Quick actions: Open Approvals, View Students, View Staff, Create Announcement, View Calendar.

5.3 Approval Center

Create a dedicated approval inbox with tabs or filters for Pending, Approved and Rejected. Each request detail screen should show who requested it, school/class context, submitted date, changed information, attachments if any, comments and action buttons.

Request type	Principal action
Teacher addition / update	Review request; approve or reject. Credentials are generated only after approval.
Timetable	Review generated timetable; approve/reject. Principal or Vice Principal can publish an approved timetable.
Fees allocation	Review proposed fee structure and approve/reject.
Results	Review result submission and approve/reject before publication.
Attendance	Review relevant attendance approval/correction requests.
Staff leave	Approve/reject based on assigned authority.
Teacher assignment change	Approve/reject changes to class, section or subject assignment.

5.4 Staff Performance

- Staff directory with filters by role, department, designation and status.
- Teacher attendance summary and leave history.
- Teacher workload / assigned classes and subjects.
- Profile detail view. Do not expose data beyond Principal permissions.

5.5 Student Directory

- Search students by name, student username, class, section and roll number.
- View student profile, parent/guardian contacts, attendance and academic records according to permissions.
- Principal does not directly edit student data in the agreed flow. For correction, Admin edits the record and the change is recorded in Audit Logs.

5.6 School Calendar and Announcements

- Calendar views: month, week and event list.
- Events: school holidays, exams, meetings and school activities.
- Announcements: target whole school, selected classes or selected staff groups where permission allows.
- Show draft, scheduled and published states if scheduling is supported.

5.7 Admin Management and Branding

- Create multiple Admin accounts.
- Create Vice Principal account.
- View account status and initiate password reset.
- Manage school logo, school name and contact details.
- School branding changes should update the Student App where relevant.

6. Vice Principal Module

Vice Principal uses a school-issued username and password. The agreed decision is that the Vice Principal has the same approval authority as the Principal. The Vice Principal cannot create Admin accounts or manage School Branding.

6.1 Main Navigation

- Dashboard
- Approvals
- Daily Operations
- Classroom Monitoring
- Exams
- Discipline
- Substitute Teachers
- Staff Coordination
- Profile

6.2 Selected Features

Feature	Screens and key content
Approval Dashboard	Pending, approved and rejected requests; request details; approve/reject with comment.
Daily Operations	Daily attendance snapshot, staff availability, pending operational items.
Classroom Monitoring	Class/section list, attendance status, assigned teacher and class activity.
Exam Coordination	Exam schedule, marks submission status, classes pending results.
Discipline Management	Incident list, incident detail, date, student/class, category, notes and follow-up status.
Substitute Teacher Management	Absent teacher, affected period/class, available substitute, assignment confirmation.
Staff Coordination	Teacher workload, pending tasks, staff availability and coordination updates.

6.3 Permission Rules

- Same approval authority as Principal for the approved request types.
- Cannot create Admin accounts.
- Cannot manage school logo/branding.
- Cannot change school ownership-level settings.
- All approvals must record the actual user who approved the request.

7. Admin Module

Admin is the primary school operations and data-management role. A school may have multiple Admin accounts.

7.1 Admin Navigation

- Dashboard
- Admissions
- Students
- Teaching Staff
- Non-Teaching Staff
- Academic Setup
- Attendance
- Timetable
- Exams & Results
- Fees
- Notices
- Transfers & Promotions
- Documents
- Reports
- Approvals
- Audit Logs
- Profile

7.2 Admin Dashboard

- Total students and staff counts.
- Class and section counts.
- Student and staff attendance snapshot.
- Pending approval requests.
- Admissions and data import status.
- Timetable status and exam/result status.
- Quick actions: Add Student, Add Teacher, Add Non-Teaching Staff, Import Excel, Create Timetable.

7.3 Academic Setup

This setup is required before student enrollment, teacher assignment and timetable creation.

Setup area	Design screens
Academic Year	List years, create year, set active year, request year transition approval.
Classes	Add/edit class, set display order and active/inactive status.
Sections	Add sections under a class, manage section status.
Subjects	Create subject catalogue, subject code, map subjects to classes.
Working Days	Select school working days.
School Timings	Set start/end time and period duration.

Setup area	Design screens
Holidays	Create school holiday calendar.

7.4 Student Management

- Manual add student and bulk Excel import.
- Fields for initial account creation should stay minimal as requested: student name, class, section, roll number and required school assignment data.
- System generates student username and temporary password.
- Student completes the remaining profile in the Student App.
- Admin can edit student data. Every edit must create an audit record with old value, new value, editor and timestamp.
- Student admission, transfer, promotion and inactive status should have clear screens.

7.5 Teaching Staff Management

The Admin creates a teacher request. The request is sent for Principal or Vice Principal approval. Credentials are generated only after approval.

Teacher type	Fields and behaviour
Class Teacher	Full Name, designation = Class Teacher, Class, Section. Assignment may change later with approval.
Subject Teacher	Full Name, designation = Subject Teacher, subjects the teacher can teach, and current assigned classes/sections where applicable.
Common	Approval status, username after approval, temporary password delivery, active/inactive status, assignment history.

Keep two separate concepts in the design: Subjects the teacher is qualified/willing to teach, and subjects/classes currently assigned. A teacher may have subjects they can teach but no current assignment.

7.6 Non-Teaching Staff Management

- Admin enters Full Name and Designation.
- System generates username and temporary password.
- Exact designation list is still pending. Possible examples include Accountant, Librarian, Receptionist, Lab Assistant, Office Assistant, Security and Maintenance staff.
- Do not design fees collection or payment gateway screens as confirmed V1 functionality.

7.7 Excel Bulk Import

Template	Expected design
Student Excel	Download template, upload file, map/validate columns, preview rows, show row-level errors, confirm import, show success/failure summary.
Teaching Staff Excel	Download template, upload, validate names/designations/classes/sections/subjects, submit for required approval, generate credentials after approval.
Non-Teaching Staff Excel	Download template, upload, validate name/designation, preview, confirm import and show results.

Use separate templates. Never make the user guess the expected column names. Provide a sample row and a downloadable template.

7.8 Fees Management

- Create fee structures and fee categories such as General, OBC, SC, ST and EWS.
- Configure amounts, applicable concessions and effective academic year.

- Show an approval step before the fee structure becomes active.
- Show fee structure history.
- Online payment gateway and payment collection are not confirmed for V1. Do not design a full payment experience as committed scope.

7.9 Timetable Generator

- Select academic year, class, section, subjects, teachers, periods, school days and timings.
- Configure teacher availability and period duration.
- Generate class timetable and teacher timetable.
- Show timetable conflicts clearly: teacher double-booked, class double-booked, unavailable teacher, missing subject/period.
- Admin submits the timetable for approval.
- Principal or Vice Principal approves and can publish the approved timetable.
- Notify affected students and teachers after publishing or updating.

7.10 Exams and Results

- Create exam, exam dates, classes, subjects and maximum marks.
- Track marks entry by assigned teachers.
- Show missing marks and validation errors.
- Compile results and submit for approval.
- Only approved results can be published to Student/Parent App.

7.11 Remaining Admin Features

Feature	Design requirements
Admission Management	Admission list, application detail, status, enrollment and document checklist. Exact admission process pending.
Attendance Management	Student/staff attendance overview, filters, corrections and reports.
Notice & Circulars	Create notice, audience selection, attachments if approved, preview, publish.
Transfer & Promotion	Select academic year, select students, map next class/section, preview and confirm.
Reports & Analytics	Filters, summary cards, charts, export action where permitted.
Document Management	Upload, preview, categorize and view documents with permission controls.
Audit Logs	Search by user, action, module, date and record. Show old/new values where allowed.

8. Teaching Staff Module

Teaching Staff logs in with a school-issued username and password. The design must support two teaching types: Class Teacher and Subject Teacher.

8.1 Teacher Profile Completion

- Pre-filled Full Name, editable by the teacher.
- Email ID, mobile number and recovery email.
- Profile photo optional unless confirmed otherwise.
- Show assigned role, classes, sections and subjects.

8.2 Teacher Dashboard

- Today's timetable widget.
- Next class / next period.
- Assigned classes and subjects.
- Attendance tasks.
- Homework and marks tasks.
- Pending leave status.
- Unread messages and school notices.

8.3 Class Teacher Features

Feature	Screen details
Class Teacher Dashboard	Assigned class overview, student count, attendance summary, upcoming events.
Student List	Search/filter students in assigned class and section; open student view.
Student Attendance	Mark attendance for assigned class. Show present/absent/late or other statuses only if school policy defines them.
Homework	Create homework, select class/subject/date/due date, attach instructions if allowed, view completion/submission status.
Student Performance	View marks and performance for the assigned class within permissions.
Parent Communication	Message the assigned class parents through authorized conversations.

8.4 Subject Teacher Features

- View assigned subjects, classes and sections.
- Enter marks for assigned subject/class only.
- Create subject homework.
- View subject-specific student performance.
- Mark subject/period attendance only according to the final separate attendance rules.

8.5 Common Teaching Staff Features

ID	Feature	Design screens
T1	Personal Timetable Widget	Today, week, period details, class, section, subject, room if available.
T2	Student Attendance	Class/subject selection, attendance list, save confirmation, attendance summary.

ID	Feature	Design screens
T3	Homework Management	Create, edit draft, publish, view homework list and submissions.
T4	Marks Entry	Exam/subject/class selection, marks grid, validation, save draft and submit.
T5	Leave Management	Apply leave, dates, reason, attachment if required, status/history.
T6	Class Teacher Dashboard	Class overview and class-level actions.
T7	Student Performance	Student profile and academic history within permission.
T8	Communication	Authorized staff/parent conversations, inbox and message detail.
T9	Substitution Requests	Request substitute, select affected period/class, reason, status.
T10	Lesson Planning	Subject, topic, planned date, completion status and syllabus progress.

8.6 Teacher Assignment Change

Teacher class, section and subject assignments may change at any time, but every change requires approval. Design a request form, pending state, approval result and assignment history. Do not overwrite previous assignments.

9. Non-Teaching Staff Module

The exact staff designation list is not final. Design a flexible dashboard that can adapt to the staff member's department and assigned duties.

ID	Feature	Design screens
N1	Personal Timetable / Duty Widget	Today's duty, duty time, location, upcoming duty.
N2	Attendance & Leave	Own attendance, attendance history, leave request and leave status.
N3	Assigned Tasks	Task list, task details, deadline, status and completion update.
N4	Communication	Authorized internal staff messaging.
N5	Department Dashboard	Department overview and relevant records.
N6	Asset & Inventory Management	Asset list, assigned assets, stock items, issue/return and maintenance request.

9.1 Design Notes

- Show only the features relevant to the staff member's assigned permissions.
- A Librarian, Accountant and Security Staff member may need different dashboard cards. Do not assume all non-teaching staff share the same work.
- Fees collection/payment is not confirmed in V1.
- Keep department and designation labels configurable.

10. IT / Technical Staff Module

IT Staff accounts are created by the Company Super Admin. IT Staff should have technical access only. Do not design unrestricted access to student, parent, marks or fee data.

ID	Feature	Design screens
I1	User Account Support	Support queue, account lookup by safe identifier, reset request, activation/deactivation workflow.
I2	Device Management	Device list, device detail, assigned school, status, last sync and maintenance notes.
I3	Technical Support Tickets	Ticket list, priority, status, reporter, issue detail, comments and resolution.
I4	System Monitoring	Service status, error summary, integration health and alerts. Actual technical metrics depend on backend.
I5	Access Management	Role/permission view and authorized access requests. Sensitive actions require proper controls.
I6	Backup & Recovery Monitoring	Backup status, last successful backup, failure alerts and recovery test status.

10.1 Company Super Admin vs School IT Staff

The Company Super Admin creates the IT Staff account. The detailed boundary between company-wide technical administration and school-level IT access is pending. Show school assignment and role scope clearly in the account design.

11. Student App — Entry and Student Login

The Student App is a separate application from the School App. It supports two modes: Student and Parent.

11.1 App Entry Flow

Step	Screen	UI requirements
1	Splash Screen	Student App logo and loading state.
2	Welcome / Landing	Two clear options: Login as Student and Login as Parent.
3A	Student Login	Username and password fields; show/hide password; forgot password.
3B	Parent Login	Mobile number and send OTP.
4	Verification	Student account validation or Parent OTP verification.
5	Profile / Child Setup	Student profile completion or Parent Add Child flow.
6	Dashboard	Open the correct Student or Parent dashboard.

11.2 Student Login

- Student selects Login as Student.
- Enter school-issued username and password.
- Validate account and school association.
- First login may require password change.
- If profile is incomplete, open Student Profile Completion before normal dashboard access.
- After successful login, show the school logo and student identity.

11.3 Student Profile Completion

Field	Requirement
Student Full Name	Mandatory
Parents' Name	Mandatory
Parents' Mobile Number	Mandatory
Student Mobile Number	Optional
Email ID	Optional
Address	Optional
Emergency Contact	Optional
Gender	Mandatory
Roll Number	Mandatory
Class	Mandatory
Section	Mandatory
Date of Birth	Mandatory
Height	Optional
Weight	Optional
Blood Group	Optional

Field	Requirement
Hobbies	Optional

Health details (height, weight and blood group) and hobbies are optional. Do not block the student from using the app if optional fields are empty.

11.4 Student Profile UI

- Use clear groups: Personal Details, Parent/Guardian Details, School Details and Optional Health Details.
- Show pre-filled school data where available. Student should not be able to change school, class, section or roll number unless the school workflow allows it.
- Show profile completion progress, but do not treat optional fields as mandatory.
- Provide save draft / save changes behaviour as appropriate.

12. Student Dashboard and Features

The exact Student feature list has not yet been fully confirmed by the product owner. The following screens are based on the features already discussed for Student access and the selected school modules. Items marked Proposed must be confirmed before final design.

12.1 Student Dashboard

- School logo and school name.
- Student name, class, section and roll number.
- Today's timetable widget.
- Attendance summary.
- Upcoming homework.
- Upcoming exams.
- Recent notices and holiday announcements.
- Recent result/academic update where published.
- Unread messages or communication entry if enabled.

12.2 Student Feature Screens

Feature	Proposed student experience	Status
Timetable	Today/week view, period, subject and teacher.	Discussed / design
Attendance	Attendance summary, date-wise history and attendance percentage if calculated.	Discussed / design
Homework	Homework list, detail, due date and attachments if enabled.	Selected teacher feature; student side to confirm
Results / Report Card	Published exam results, subject marks and report card view.	Discussed / design
Notices	School-wide and class-specific notices, holiday announcements.	Discussed / design
Communication	Student messaging permissions and recipients to be confirmed.	Pending
Profile	Student profile and optional details.	Confirmed fields
Documents	View/download permissions to be confirmed.	Pending

12.3 Student Navigation Proposal

- Home
- Timetable
- Attendance
- Homework
- Results
- Notices
- Profile

The designer may propose a compact bottom navigation and place less-used items under More. Confirm final navigation with the product owner.

13. Parent Module — Login, Child Linking and Dashboard

Parent mode is inside the Student App. A Parent logs in using a mobile number and OTP. One Parent account can connect to multiple children, including children at different schools. A Student may have multiple authorized guardians.

13.1 Confirmed Parent Decisions

Decision	Confirmed requirement
Verification	Registered Parent Mobile OTP.
Guardians	Multiple Parents / Guardians may be associated with one student.
Communication	Parent communicates with the child's Class Teacher only.
Child linking	Parent enters the Student Username.
Multiple children	Allowed.
Multiple schools	Allowed.

13.2 Parent Registration and Login Flow

Step	Screen	UI requirements
1	Select Parent Login	From Student App landing screen.
2	Enter Mobile Number	Phone field and send OTP.
3	OTP Verification	OTP input, resend, edit number.
4	Parent Home / Add Child	New Parent sees Add Your Child. Existing Parent sees linked children.
5	Enter Student Username	One child username per linking action.
6	Verify Registered Guardian Mobile	Backend must match the Parent's verified mobile number with the student's registered guardian number.
7	Child Linked	Show success and the linked child's basic identity only after successful verification.
8	Add More Children	Repeat the process for other children.

Security rule: Entering a Student Username alone must never reveal student details or grant access. If the verified Parent mobile does not match a registered guardian number, deny access. The exception process is not yet defined.

13.3 Parent Child Switcher

- Show each linked child as a card with child name, school name, class and section.
- Show the selected child clearly on every screen.
- Allow switching between linked children.
- For children in different schools, show the correct school logo and school-specific information.
- Provide Add Another Child action.
- Do not expose children that are not linked to the Parent account.

13.4 Parent Dashboard

- Selected child's name, photo if available, school logo, class and section.
- Attendance report.
- Timetable.

- Published report card and academic performance.
- School notices and holiday messages.
- Homework information if enabled.
- Communication with the child's Class Teacher only.
- Notifications and profile/account settings.

13.5 Parent–Teacher Communication

- Parent opens the selected child's communication section.
- Show only the assigned Class Teacher for that child.
- Parent can start or continue a conversation.
- Teacher can reply.
- Show conversation history, timestamps, delivery/read status if supported.
- Notify both sides about new messages.
- Attachment support is pending; do not assume it is included.

13.6 Parent Profile

Parent profile completion fields and account settings are still pending. The designer should prepare a basic profile/settings entry point but must not invent mandatory fields.

14. Communication and Notifications

14.1 Communication Areas

Conversation type	Access / scope
Parent ↔ Class Teacher	Confirmed. Parent can communicate with the selected child's Class Teacher.
Teacher ↔ Parent	Class Teacher can respond to authorized linked parents.
Staff Internal Communication	Selected feature for Teaching and Non-Teaching Staff; exact recipient permissions pending.
School Announcements	Principal/Admin can publish announcements according to permissions.
Student Communication	Recipient and messaging rules pending.

14.2 Notification Events

- Timetable created, approved, published or updated.
- New school notice or circular.
- Homework assigned.
- Exam schedule published.
- Result published.
- Leave approved or rejected.
- Approval request received or status changed.
- New communication message.
- School holiday announcement.

14.3 Notification UI

- Notification list with unread/read state.
- Filter by All and Unread.
- Tap notification to open the related screen.
- Show timestamp and source.
- Handle notifications for multiple children by showing the child and school context.
- Notification channel settings (push, in-app, email, SMS) are pending.

15. Shared Screens, States and Error Handling

15.1 Common Screens

- Splash and onboarding.
- Role selection.
- Login and OTP verification.
- Profile completion.
- Search and filter.
- Notifications.
- Help/support.
- Settings and logout.
- No internet and session expired.

15.2 Required States for Every Important Feature

State	Expected design
Loading	Skeleton or spinner with stable layout.
Empty	Explain why there is no data and show an allowed next action.
Error	Human-readable message and retry action.
Success	Confirmation and next step.
Pending	Show who/what is pending and expected next action if known.
Rejected	Show rejection reason and whether resubmission is possible.
Disabled	Explain why the action is unavailable if useful.
Permission denied	Explain that the current role does not have access.

15.3 Destructive and Sensitive Actions

- Confirm before deleting, deactivating, unlinking, publishing or changing important records.
- Show the exact record affected.
- For important updates, show a review/confirmation screen.
- Do not show sensitive personal data in search previews before access is verified.
- Do not show passwords in plaintext.

16. Navigation and Screen Inventory

This is the minimum screen inventory for design planning. Some screens may be shared components with role-specific content.

Area	Screens to design
School App	Splash, Landing, Role Selection, Principal Mobile Login, OTP, Staff Login, Forgot Password, Profile Completion
Principal	Dashboard, Approval List, Approval Detail, Staff Directory, Staff Detail, Student Directory, Student Detail, Academic Performance, Calendar, Announcement Create/Detail, Admin List, Add Admin, Add VP, School Branding, Settings
Vice Principal	Dashboard, Approval List/Detail, Daily Operations, Classroom List/Detail, Exam Coordination, Discipline List/Create/Detail, Substitute Assignment, Staff Coordination
Admin	Dashboard, Academic Year List/Create, Class List/Create, Section Setup, Subject Setup, Admission List/Detail, Student List/Add/Edit/Detail, Teacher List/Add/Edit/Detail, Non-Teaching Staff List/Add, Excel Import Wizard, Fees Structure, Approval Requests, Attendance Overview, Timetable Builder, Timetable Preview, Exam Setup, Marks/Results, Notices, Promotion/Transfer, Documents, Reports, Audit Logs
Teaching Staff	Dashboard, Timetable, Class Dashboard, Student List/Detail, Attendance Marking, Homework List/Create/Detail, Marks Entry, Leave Apply/History, Communication Inbox/Chat, Substitution Request, Lesson Plan
Non-Teaching Staff	Dashboard, Duty Schedule, Attendance, Leave, Tasks, Task Detail, Department Dashboard, Asset List/Detail, Inventory, Maintenance Request, Communication
IT Staff	Dashboard, Support Queue, Account Support Detail, Device List/Detail, Ticket List/Create/Detail, System Status, Access Request, Backup Status
Student App - Student	Landing, Student Login, Forgot Password, Profile Completion, Student Dashboard, Timetable, Attendance, Homework, Results, Notices, Profile, Settings
Student App - Parent	Landing, Parent Mobile Login, OTP, Add Child, Child Link Result, Child Switcher, Parent Dashboard, Attendance, Timetable, Report Card, Notices, Communication, Chat, Parent Profile, Settings

17. Required Design Deliverables

17.1 UX Deliverables

- Information architecture for both applications.
- Role-wise user flow diagrams.
- Authentication and account recovery flows.
- Principal, Vice Principal, Admin, Teacher, Non-Teaching Staff and IT Staff flows.
- Student login and profile completion flow.
- Parent login, child linking, multi-child and multi-school flow.
- Approval and notification flows.
- Empty, error, success, pending and rejected states.

17.2 UI Deliverables

- Low-fidelity wireframes for all screens.
- High-fidelity mobile UI for both apps.
- Tablet/desktop designs for data-heavy Admin/management screens if those platforms are in scope.
- Reusable component library and design tokens.
- Light/dark mode only if confirmed; do not assume it is required.
- Clickable prototype covering the main user journeys.
- Exported icons, illustrations and visual assets where needed.

17.3 Figma File Structure

- 00 — Cover, Notes and Design Status
- 01 — Foundations and Design Tokens
- 02 — Shared Components
- 03 — School App: Authentication
- 04 — School App: Principal
- 05 — School App: Vice Principal
- 06 — School App: Admin
- 07 — School App: Teaching Staff
- 08 — School App: Non-Teaching Staff
- 09 — School App: IT Staff
- 10 — Student App: Student
- 11 — Student App: Parent
- 12 — Notifications and Communication
- 13 — Empty / Error / Loading / Success States
- 14 — Prototype and Handoff

17.4 Screen Naming Convention

Use consistent names, for example: SCHOOL-PRINCIPAL-DASHBOARD, SCHOOL-ADMIN-STUDENT-LIST, STUDENT-PARENT-ADD-CHILD, STUDENT-STUDENT-TIMETABLE. Include screen number or flow number where useful.

18. Prototype and Handoff Requirements

18.1 Prototype Must Demonstrate

- New Principal registration and school verification pending screen.
- Existing Principal login.
- Principal creates Admin and Vice Principal.
- Admin adds a teacher and submits approval; credentials appear only after approval.
- Admin creates classes, sections and subjects.
- Admin imports a student Excel file and sees validation results.
- Admin creates a timetable, submits it for approval, and Principal/VP publishes it.
- Teacher sees the timetable widget and marks attendance.
- Teacher submits leave request.
- Parent logs in using OTP and adds a child using Student Username with registered guardian mobile verification.
- Parent switches between multiple children and schools.
- Parent opens communication with the selected child's Class Teacher.

18.2 Developer Handoff

- Use Auto Layout and reusable components in Figma.
- Name layers and components clearly.
- Provide spacing, typography, colour and component specifications.
- Provide assets in SVG/PNG as appropriate.
- Document interactive behaviour for buttons, tabs, dropdowns and dialogs.
- Mark all sample data and all pending business rules.
- Include mobile frame sizes and any responsive breakpoints.

18.3 Review and Approval Process

- Step 1: Product owner reviews user flows.
- Step 2: Product owner approves low-fidelity wireframes.
- Step 3: Designer completes high-fidelity UI.
- Step 4: Product owner reviews all role-based screens and states.
- Step 5: Designer builds clickable prototype.
- Step 6: Developer reviews feasibility and edge cases.
- Step 7: Final design handoff.

19. Pending Product Decisions

The designer must not silently decide these items. Create a question/assumption list and get product-owner approval before finalizing affected screens.

Area	Pending decision
Student App	Complete student feature list and final navigation.
Student App	Student-to-teacher communication permissions.
Student App	Document view/download permissions.
Parent	Parent profile fields and profile completion requirements.
Parent	How to handle a legitimate guardian whose mobile number does not match the student record.
Parent	Child unlinking and guardian removal process.
Parent	Device/session limits and mobile number change process.
Parent	Communication attachments and file sharing.
School roles	Final IT Staff permissions and scope.
School roles	Final Non-Teaching Staff designations and department-specific screens.
Approval	Exact approval delegation, rejection reason and resubmission rules.
Attendance	Attendance correction workflow and exact statuses.
Attendance	Biometric device types, integration status and exception handling.
Timetable	Room allocation, break periods, substitute timetable and conflict resolution rules.
Fees	Fee category eligibility, concession rules and fee payment scope.
Notifications	Push, in-app, SMS and email channels; user preferences.
Admissions	Admission application fields, document checklist and approval process.
Accounts	Exact username format and temporary password delivery method.
Platforms	Whether Admin/Principal need desktop/tablet web designs in addition to mobile.
Branding	Final logo, colour palette, typography and app names.

20. Designer Quality Checklist

- ■ Both applications have separate and clear entry points.
- ■ All six School App roles have a role-specific flow.
- ■ Student and Parent modes are clearly separated inside the Student App.
- ■ Principal new-user and existing-user flows are covered.
- ■ School-not-listed registration is covered.
- ■ Admin can manage multiple Admin accounts.
- ■ Teacher creation includes approval before credential generation.
- ■ Class Teacher and Subject Teacher have different assignment screens.
- ■ Teacher assignment history and change request screens are covered.
- ■ Three Excel templates and upload validation flow are covered.
- ■ Timetable generation, conflict, approval and publish states are covered.
- ■ Student and staff attendance flows are covered.
- ■ Manual and biometric staff attendance states are considered.
- ■ Exam, marks entry and result approval/publishing are covered.
- ■ Fees structure approval is covered; online payment is not assumed.
- ■ Student profile mandatory and optional fields are clearly distinguished.
- ■ Parent OTP and child linking flow is covered.
- ■ Parent child linking checks registered guardian mobile; username alone does not grant access.
- ■ Multiple children and multiple schools are supported in UI.
- ■ Multiple guardians are supported in the data model and relevant UI.
- ■ Parent communication is limited to the Class Teacher in V1.
- ■ School logo appears in the relevant Student App experience.
- ■ All important screens include loading, empty, error and success states.
- ■ All sensitive actions have confirmation and permission states.
- ■ Figma components, tokens, naming and developer handoff are complete.

END OF DESIGN SCOPE REPORT

Product owner approval is required for all items marked Pending before final UI sign-off.
